

The Moog Guitar to Debut at Summer NAMM

Thursday, 12 June 2008 18:52

The much-anticipated and much-talked-about Moog Guitar will debut at Summer NAMM in Nashville. Moog Music Inc. will unveil The Moog Guitar at a press conference at 10:30 a.m. on Saturday, June 21.

The Moog Guitar opens the guitarist to a whole new musical vocabulary: It's not a guitar synthesizer; not a MIDI guitar; not an effects processor. The guitarist is intimately connected to The Moog Guitar because it works its magic on the strings themselves.

The Moog Guitar offers three unique modes...Sustain, Mute and Controlled Sustain. In the Sustain mode, it provides infinite, powerful sustain on every string and at every fret position; Mute removes energy from the strings, resulting in a variety of staccato effects; Controlled Sustain allows the musician to play sustained, single-note or even polyphonic lines with strong sustain and effortless clarity. In this mode, the Moog Guitar sustains the notes being played while actively muting the notes not being played.
