

BBE sound has announced a frisky new pedal called the Two Timer. The Two Timer was inspired by the long discontinued Boss DM-2*, still fondly remembered for its warm, haunting reverb and tape-like echoes. Essentially two analogue delays in one compact package, the BBE Two Timer offers two independent delay times, both foot switchable via the Time 1/Time2 mode switch. This makes it possible to have one delay setup for a short slapback rhythm sound, while another can be set to a longer delay for solos.

The Two Timer circuit features 1% metal film resistors for pristine audio quality, true hardware bypass for a clean signal path when the effect is bypassed, along with BBD (Bucket Brigade Delay) for the warmth and character only analogue can deliver. Other features are a delay range of 0ms – 330ms, repeat and mix functions, plus on/off LED indicator. The unit is guaranteed for 5 years.
