

Godin Unveils N-Tune Onboard Chromatic Tuner

Thursday, 12 February 2009 15:23

Montreal based Godin Guitars recently unveiled a roomful of new models at this past Winter NAMM in Anaheim, including the Godin Performance Series which are now available with the optional add-on of the innovative N-Tune Onboard Chromatic Tuner. Godin's Performance Series guitars to offer the optional N-Tune system are the SD, Exit 22, Freeway Classic, Redline HB, LG HB, and LG P90.

“Every once in a while a product comes along and you just ‘get it’”, says Godin Sales Manager, Mario Biferali. “N-Tune is clever in design, simple to use, and works. It provides guitar players with a no-hassle solution to tuning. Our guitars, being made in North America, offer tons of value, and the N-Tune tuner adds to that—and customers can easily see that value and appreciate it. Godin has always been open to new ideas and concepts, so it was an easy decision for us to partner with N-Tune.”

“When we first started our company, there were a handful of guitar manufacturers we wrote on a white board that we all agreed would be ideal partners to help showcase N-Tune's quality and form factor,” explained N-Tune president Sam Sudore. “Godin was one of these companies. We are very proud of our new partnership. We know with Robert Godin's vision and zeal for excellence, that our partnership will be a very prosperous one.”
